

RA QT-22 Chemistry for Konica™

CPAC Europe specifically designed RA-QT chemistry for use in Konica™ Niceprint minilabs. The RA-QT chemistry is 100% compatible with the current products used in these types of minilabs.

Developer starter

For use with all RA Developer Replenishers, including the RA-QT developer, to make fresh working tank solutions. The easy-to-follow instructions for adding the proper amounts of starter, water and replenisher are found in the mixing instructions included with the RA-QT ClearPhase Developer replenisher.

RA-QT ClearPhase™ Developer Replenisher

Cpac Europe's RA-QT ClearPhase Developer is a One-Part high speed RA-4 paper developer specifically designed for the Konica Niceprint minilabs. It replenishes between 110 ml and 125mls/m² depending on the application. The standard processing time is 22 to 27 seconds at a temperature of 38-40°C. Developer overflow is significantly reduced when compared to a standard 160 ml/m² developer replenisher. This will result in a lower BOD and COD in the photographic processing effluent. The RA-QT ClearPhase™ Developer will remove the unpleasant chemical odors from your laboratory. RA-QT ClearPhase™ developer is an extremely clean running product and is specially designed to prevent sedimentation on the developer racks and filters. This will save time and money because cleaning time is reduced and chemical filters last longer. The RA-QT ClearPhase™ developer is conveniently packaged in pre-measured, easy-to-use liquid concentrates.

Catalog Number	Mix Size	Shipping Weight
30DE3136	6x10 L	7.69 kg

Specifications :

- Time : 0'22" – 0'27"
- Temperature : 40°C (22") or 38°C (27") (+/- 0.3°C)
- Replenishment rate*: 125 (22") or 116 (27") ml/m²

(*) Replenishment rates are starting points. Actual replenishment rates will be affected by type of machine, utilization and types of material processed.

Trecom RA-QT Mono Part Bleach-Fix

Trecom RA-QT Mono Part Bleach-Fix has been specifically designed for use in the Konica Niceprint minilabs running at 22 or 27 seconds. The Bleach Fix is a one-part product, so that mixing errors are eliminated and packaging waste is reduced to a minimum.

Specifications :

- Time : 0'22" – 0'27"
- Temperature : 35-39°C
- Replenishment rate*: 200 ml/m²

Trecom RA Mono Super Stabilizer Plus

A newly formulated One-part paper stabilizer for the waterless process that enhances dye stability, produces excellent whites, and resists biological growth due to CPAC Europe's innovative use of Twin-Biocides™. This solution also enhances the archival quality of the finished product by complexing any excess bleach-fix remaining in the paper, and removing the residual soluble silver from the paper. The one-part formulation reduces the packaging waste by 50% and the chance of mix errors by the end-user are reduced as well.
